2. Site "A" was located on Poligraficheskaya Street in the Moskovskiy rayon (virtually in the center of town), where it occupied an area 1 x 1.5 kilometers in size which was surrounded by a 2-meter-high brick fence. This street had a different name but the townspeople still referred to it as Poligraficheskaya. The site comprised the management of the entire plant and shops for the production of aircraft components, such as Shops (tsekha) Nos. 1, 2, 3, 4, 6, 7, 8, 9, 12, and 22. Also at this site were Auxiliary Shops Nos. 21, 38, 44, and 49, as well as store buildings, garages, and the central laboratory. Shops Nos. 1 and 3 were mechanical workshops producing small aircraft components made of aluminum and steel, such as bolts Islact Hollow Cylimners! Shop No. 2 was also a mechanical workshop which produced and muffs. tubular constructions for airframes. Shop No. 6 was the hydraulic presses shop, while Shop No. 7 was the sheet aluminum cutting shop (zakroyechniy tsekh). Shop No. 8 was engaged in hardening small components, and Shop No. 9 was an aluminum components casting shop (aluminyevo liteyniy tsekh). Shop No. 12 produced work tools (instrumentalniy tsekh), while Shop No. 22 assembled small parts (tsekh sborki myelkikh uzlov). Of the auxiliary shops, No. 21 was the chief mechanic's shop, No. 38 was the transport shop for conveying components from Site "A" to Site "B", Shop No. 44 was the electrical shop, and No. 49 the power shop (steam, gas, compressed air, etc.).

- 3. In 1953, Site "A" contained the following thirteen buildings:
 - a. A building about one kilometer long and 100 to 150 meters wide

 \[\left[\left[\left]] \frac{1}{2} \right[\left[\left]] \right] \]

 the shape of a trapezoid; it was the largest building at the site.

 The front of the building was three stories high and contained

 the plant's management and administrative offices. The back

 of the building was about two and one-half stories high and

 housed Shops Nos. 1, 3, 7, and 12.
 - b. A building about 400 meters long, 300 meters wide, and two and one-half stories high. Shop. No. 6 occupied this entire building.
 - c. A building 180 meters long, 100 meters wide, and two and onehalf stories high, which was occupied by Shop No. 8.
 - d. A building 300 meters long, 250 meters wide, and one and one-half stories high. Four-fifths of this building was occupied by Shop No. 4, while one-fifth of it served as a warehouse for sorting components to be transported to Site "B".
 - e. A single-story building 20 meters long and 20 meters wide, which housed Shop No. 44.
 - f. A two-story building about 50 meters long and 30 meters wide, which housed Shop No. 49.
 - g. A single-story building (but the height of a building about one and one-half stories) about 80 meters long and 30 meters wide, which was occupied by Shop No. 21.
 - 'h. A building about 500 meters long, 300 meters wide, and about two and one-half stories high, which was occupied by Shops Nos. 2 and 22.

CECDET

	50X1-HUM
	i. A single-story building about 40 meters long and 15 meters wide,
	which housed the central laboratory for the entire plant.
	j. A single-story building about 60 meters long and 15 meters
	wide, which served as a warehouse for raw materials.
	k. A fire brigade building.
	1. A guardroom (civilian, armed guards).
	m. A garage, the only one of the listed buildings situated just
	outside the area of Site "A".
∔.	Site "B" was located in the Kuybyshev district at the southeastern
	end of the town. Next to the area was the plant's airfield, a
	concrete-surfaced poligon 2 x 2 kilometers in size for testing finished
	aircraft. Site "B" included all the assembly shops of the plant,
	among which were Shops Nos. 10, 15, 19, 34, 35, and 36. The exact
	functions of each of these shops was notknown . There 50X1-HUN
	were more buildings in Site "B" than there were in Site "A", although
	they were smaller. The buildings of Shops Nos. 34, 35, and 36, among
	the largest in the area, were large hangars. Shop No. 35 carried out
	the final assembly of the aircraft, which were painted in Shop No. 34
	and were statically tested in Shop No. 36.
5•	Site "V" of the plant was situated at 18 ulitsa Vnov Probitaya, a
	new street in the Kuybyshev district but in the northeastern end
	of town. Site "V" occupied an area 400 meters x 300 meters which was
	unfenced. A railroad spur led into this area, 50X1-HUN

as a	a sawmill and comprised a	single-story building 30 meters x 15
mete	ers, another single-story	building 30 meters x 20 meters housing
the	carpentry machinery, and	a two-story building 15 x 15 meters used
for	drying lumber.	

Site "T" was situated in	the Frunze district of the town nea	$_{ m r}$ $_{ m th}$ 50X1-HUN
Textiles Combine - hence	the designation "T"	
	The area was known to serve solely	as a 50X1-H
raw materials depot and	was served by a railroad spur.	
		50X1-H

- 7. Directly opposite Site "A", on Poligraficheskaya, there was a huge fourStory
 sotyr building belonging to Plant No. 84. Located in this building
 were the cadres department, the offices of the plant's Party cell, the
 plant trade union, offices, the restaurant, and factory kitchen
 (fabryka-kukhnya) which also served other plants and institutions.
 No permits were necessary to enter this building.
- 8. From about 1946 or 1947 to 1953, Plant No. 84 manufactured two types of piston-engined transport aircraft: the LI-2P and the LI-2T. The LI-2P was a passenger aircraft with a capaicty for 24 passengers and a three-man crew (pilot, co-pilot, and stewardess). The "P" in this designation stood for Pasazhirskiy. The LI-2T ("T" standing for Transportiniy) was a transport aircraft. The plant produced these two models, which were actually a copy of the Doublas type, in series of ten aircraft, that is, components were produced simultaneously for

SFRRFT

ten aircraft. Between 1947 and March 1953, the monthly output of the plant ranged from a minimum of 30 to a maximum of 33 of these aircraft. The engines of the LI-2P and the LI-2T were identical
ten aircraft. Between 1947 and March 1953, the monthly output of the plant ranged from a minimum of 30 to a maximum of 33 of these
the plant ranged from a minimum of 30 to a maximum of 33 of these
aircraft. The engines of the LI-2P and the LI-2T were identical
and were not manufactured at Plant No. 84, but rather at a special
engine plant in Perm. The radar and blind landing equipment were
also manufactured elsewhere . The plant's 50X1-HU
products were intended mainly for civilian use, but a military commission
consisting of fifty air force officers, headed by a major, was perma-
nently attached to the plant . In addition 50X1-HU
to the LI-2P and the LI-2T, the plant manufactured small components
for the IL-12 and, later, the IL-14 aircraft (no details on the
parts and their uses). 50X1-HU
producing LI-2 aircraft after 1953 and was still producing them in
1958. In 1954-1955, it was said that the plant began to manufacture
the IL-14 planes, but this attempt proved to be a failure and resulted
in the dismissal of the director general of the plant, Leonid
Alekseyevich Guskov, and the chief engineer, Nikolay Sivyets. Following
the failure to produce IL-14's, the plant made arrangements to begin
production of the turboprop aircraft of the UKRAINA or the AN types
(after the name of its designer, Antonov (fnu).
9. Regarding the supply of raw materials, 50X1-HUI
Plant No. 84 received its paints and lacquers from the Pobeda
Rabochikh plant in Yaroslavl, in the Moscow environs /possibly the Yaroslavl
station, at N55-47, E 37-407.

.0.		the plant began to be enlarged in about 1957.	
	A ne	ew building was erected for the galvanization shop, in the	
	vici	inity of Shops Nos. 2 and 22. Since that time, Shop No. 4 had	
	been	n a paint shop.	
1.	The	following people were or had been employed at Aircraft Plant	
	No.	84 in Tashkent:	
	a.	Nikolai Dmitryevich Shcherbakov, deputy director general of	
		the Tashkent Sovnarkhoz since its establishment in 1957, prior	
		to which time he was a deputy director of Aircraft Plant No. 84	(1-HUM)
		and head of the plant's labor and wages department.	
	ъ.	Nikolay Vasilyevich Sivyets, in charge of production at the 50X1-	HUM :
		plant since 1956-1957,	
	ſ		
			•
	c.	Babakharov (fnu), director of the designers department and	7.4. I II IB A
		an aircraft engineer by profession,	(1-HUM
		his	
		duties at the plant were of an administrative-technical type.	
		He maintained the contact with the plant's chief designer 50X	1-HUM
		(Ilyushin), who resided in Moscow.
